

TERADATA TO SQL SERVER 2016

Microsoft COE, Marlabs

Introduction

Are you looking to reduce your total cost of ownership for Teradata Data Warehouse and move towards the digital space to leverage Microsoft's cloud offering as well? If so, we can help you with this easy and painless migration effort from Teradata to Microsoft SQL Server 2016.

Data ware house migrations are customized for every client need because every client is different. Having done this in the past successfully and having compared features for Teradata and Microsoft SQL Server, we can easily migrate your data warehouse using a lift and shift approach with minimum risk and interruption to your business and daily IT staff.

The first step would be to conduct a workshop to assess the current state of your data platform and identify migration steps. This would culminate in planning and validation of a proof of concept or production workload using SQL Server 2016.

DWH Migration – High Level Overview

Migration Assessment is estimated to be a 3 weeks engagement with a fixed price
